## What are statistics?

Notes
L. status $\longrightarrow$ a "standing", or "condition"

- 1700's Germans: "Statistik" $\rightsquigarrow$ Political Science
- each datum $\longrightarrow$ statistic
- all data $\longrightarrow$ statistics
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Statistics (loosely): decision making under uncertainty $\qquad$

## Definition.

Statistics is that branch of knowledge which deals with the multiplicity of data, its
(1) collection, $\qquad$
(2) analysis, and $\qquad$
(3) interpretation ${ }^{\text {a }}$ $\qquad$
${ }^{\text {a }}$ Information-Statistical Data Mining: Warehouse Integration with $\qquad$ Examples of Oracle Basics (The Springer International Series in Engineering and Computer Science) by Bon K. Sy and Arjun K. Gupta $\qquad$ (Nov 30, 2003)
G. Jay Kerns, Youngstown State University

Figure: Two types of experiments

## Definition.

The sample space is the set of all possible outcomes. It is denoted by $S$.
$\qquad$

## Random experiments

- outcomes associated $\mathrm{w} /$ random experiments called random variables: $X, Y, Z$, etc.
- observed values: $x, y, z$

Notes

Do a Random Experiment:
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

[^0]$\qquad$

Note
Make a Frequency Histogram: $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

$\qquad$

- In general, do random experiment $n$ times
- For outcome $x$, get frequency $f_{x}$
- Turns out, $f_{x}$ can be crazy for small values of $n$
- However,

$$
\lim _{n \rightarrow \infty} \frac{f_{x}}{n}=p(x)
$$

where $p(x)$ is the "probability of outcome $x$ "

- $p$ is the probability mass function (PMF) of $X$,

$$
p_{X}(x)=\mathbb{P}(X=x), \quad \text { for } x \in S
$$

$\qquad$
$\qquad$
G. Jay Kerns, Youngstown State University Probability and Statistics

## Random variable characteristics

Let $X$ be a r.v. taking values in the sample space

$$
S=\left\{x_{1}, x_{2}, \ldots, x_{k}\right\}
$$

Notes
$\qquad$
$\qquad$
$\qquad$
Then

$$
p\left(x_{i}\right)=\mathbb{P}\left(X=x_{i}\right), \quad i=1,2, \ldots, k
$$

$\qquad$
$\qquad$
And

$$
\begin{aligned}
\sum_{i=1}^{k} p\left(x_{i}\right) & =p\left(x_{1}\right)+p\left(x_{2}\right)+\cdots+p\left(x_{k}\right) \\
& =1
\end{aligned}
$$

$\qquad$
$\qquad$
$\qquad$
$\qquad$

The mean of the r.v. $X$ is

$$
\begin{aligned}
\mu & =\sum_{i=1}^{k} x_{i} p\left(x_{i}\right) \\
& =x_{1} p\left(x_{1}\right)+x_{2} p\left(x_{2}\right)+\cdots+x_{k} p\left(x_{k}\right)
\end{aligned}
$$

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Remarks:

- the mean is a center or average value of $X$
$\qquad$
- $\mu$ can be any number or decimal
$\qquad$
- $\mu$ is the "first moment about the origin" $\qquad$
G. Jay Kerns, Youngstown State University Probability and Statistics
$\qquad$

## Notes

Example
Pick a chip out of an urn. The urn has $\qquad$ chips labeled " 1 ",
$\qquad$
$\qquad$
$\qquad$ labeled " 2 " and $\qquad$ labeled " 3 ". $\qquad$
$X=$ number listed on chip $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

[^1]The variance of the r.v. $X$ is $\qquad$

$$
\sigma^{2}=\sum_{i=1}^{k}\left(x_{i}-\mu\right)^{2} p\left(x_{i}\right)
$$

$\qquad$
$\qquad$
$\qquad$

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
G. Jay Kerns, Youngstown State University Probability and Statistics

## Random variable characteristics

- mean measures CENTER, variance measures SPREAD
- $\sigma^{2} \geq 0$
- $\sigma=\sqrt{\sigma^{2}}$ is the standard deviation

Shortcut:
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Other characteristics

Do random experiment $n$ times, observe $x_{1}, x_{2}, \ldots, x_{n}$.
Definition.
The empirical distribution puts mass $1 / n$ on each of the
$\qquad$
values $x_{1}, x_{2}, \ldots, x_{n}$.
$\qquad$
The mean of the EDstn: $\qquad$
$\qquad$
$\qquad$
$\qquad$

$\qquad$
G. Jay Kerns, Youngstown State University Probability and Statistics
$\qquad$

Other characteristics

Variance of the Empirical Distribution:

$$
v=\sum_{i=1}^{n}\left(x_{i}-\bar{x}\right)^{2} \cdot \frac{1}{n}
$$

Sample variance:

$$
v=\frac{1}{n-1} \sum_{i=1}^{n}\left(x_{i}-\bar{x}\right)^{2}
$$

Sample standard deviation:
Notes
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

$$
s=\sqrt{s^{2}}
$$

## Examples of random variables

Notes
Write down a bunch of random variables: $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
